I tried many of the ways to upload a file in a custom portlet but every one failed..
This makes me mad :/

Could anyone show me some working code example?

Here the source code for Upload file in custom portlet.
I think you will finish it off.

Attachments: [UploadPortlet.java](#) (3.0k), [index.jsp](#) (0.7k)

I have done as you said in above examples, but I am getting NullPointerException due to
I am getting length of bytes is null;
`bytes = FileUtil.getBytes(file);`

[Recent Posts](#)

```
bytes = new byte[bytes.length];  
int length=bytes.length;
```

Thanks & Regards
Jhansi

below is the code at
view.jsp

```
<%@ taglib uri="http://java.sun.com/portlet_2_0" prefix="portlet" %>
```

```
<portlet:defineObjects />
```

This is the ImageUpload portlet in View mode.

```
<form name="<portlet:namespace/>fm" method="post" enctype="multipart/form-data"
action="<portlet:actionURL />" >
<table>
<tr>
<td>File : </td>

<td><input type="file" name="<portlet:namespace/>egfile" id="<portlet:namespace/>egfile" />
</td>
<td> <input type="hidden" name="hi" id="hi" value="Hi, HW r u?" /></td>
</tr>

<tr>
<td>&nbsp;</td>
<td><input type="submit" value="Upload" /></td>
</tr>
</table>
</form>
```

ImageUpload.java

```
-----
public void processAction(ActionRequest actionRequest,
ActionResponse actionResponse) throws IOException, PortletException {

String realPath = getPortletContext().getRealPath("/");
byte[] bytes = null;
System.out.println("real path^^^^^^^^^^^^"+realPath);
UploadPortletRequest uploadRequest = PortalUtil.getUploadPortletRequest(actionRequest);
String sourceFileName =uploadRequest.getFileName("egfile");
String f=ParamUtil.getString(uploadRequest,"egfile");
File file=uploadRequest.getFile(sourceFileName);
```

```
String str=ParamUtil.getString(uploadRequest,"hi");
System.out.println("fileNme"+sourceFileName+"+++++++str"+str);
try{
bytes = FileUtil.getBytes(file);
} catch (IOException e2) {
e2.printStackTrace();
}
System.out.println("length of file"+bytes.length);

}
```

Remove

```
File file=uploadRequest.getFile(sourceFileName);
```

Replace with this code,

```
File file = uploadRequest.getFile("egfile");
```

Hi nguyen le,

I have same problem like your .

can you please give solution here how could you solve your problem.

Thanks in advance.

If any one else have solution then please share it here .

the problem is i want to add image as well as some text in database from user.

it does not work with enctype="multipart/form-data".

if i do not add this statment the text added and image not added,

if i add this statment the image added and the text does not get in process action class.

but my requirement is to get both thing from user and store in database.

Thanks and regards,
Tejas patel.

I got the answer by the following method.

```
File file=uploadRequest.getFile("fileName to get from jsp");
```

```
String name=uploadRequest.getParameter("name to get form jsp");
```

Thanks,
Tejas patel.

Tejas Patel:

I got the answer by the following method.

```
File file=uploadRequest.getFile("fileName to get from jsp");
```

```
String name=uploadRequest.getParameter("name to get form jsp");
```

Thanks,
Tejas patel.

Hi Tejas Patel, I have been uploaded file(image) and text(TextField) by using ParamUtil class. Do you want see it, email to me.
